How each role joins, and what that role uses

This is the guide for registration and for the tools on each seat. The same pages are on the web, with the screens and a film for each step: https://sensi-bility.online/sensi/guide. The films are the live screens. Phone + password. Or unlock with photo / ask support.

Registration — every role

- Open /sensi/register and choose the role card. The card name is the seat you will use.
- Enter your name, phone, and password. Tick the POPIA consent. Confirm the phone with the SMS code. The consent reads: I agree that Sensi-bility may process the personal information I enter here — my name, phone, role, and the farm records I later add — so this Farm OS account can be created and operated. I can ask support to see or correct it.
- Sign in at /sensi/m. On Me, save two selfies. The second selfie confirms the first. Then fill identity and residence.
- Household buyers skip the company questions. A commercial farmer, and the operations roles that ask, answer whether the business is registered. A farm is not created from your name.
- Market, Orders, and Demand are on every profile. The public market lines are cabbage, maize, and tomato. A hemp or nsango sale stays closed.

IKS Farm Zone and Farm Location

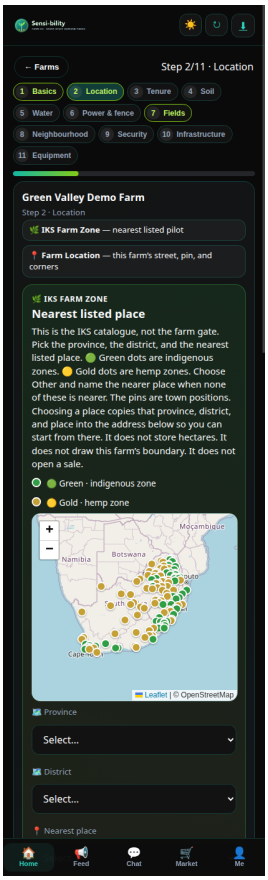

Both sit on Location, step 2 of farm onboard. They answer different questions.

IKS Farm Zone — nearest listed place

- Pick the province, the district, and the nearest listed place. Green dots are indigenous zones. Gold dots are hemp zones. Choose Other and name the nearer place when none of these is nearer.
- The pins are town positions. Choosing a place copies that province, district, and place into the address so you can start from there.
- It does not store hectares. It does not draw the farm boundary. It does not open a sale.

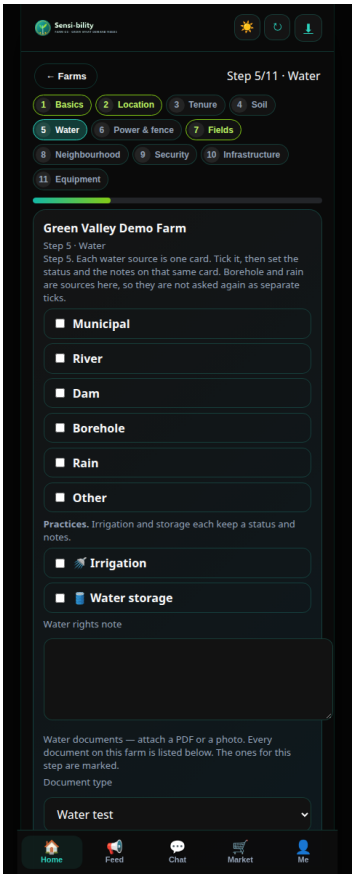

Farm Location — this farm

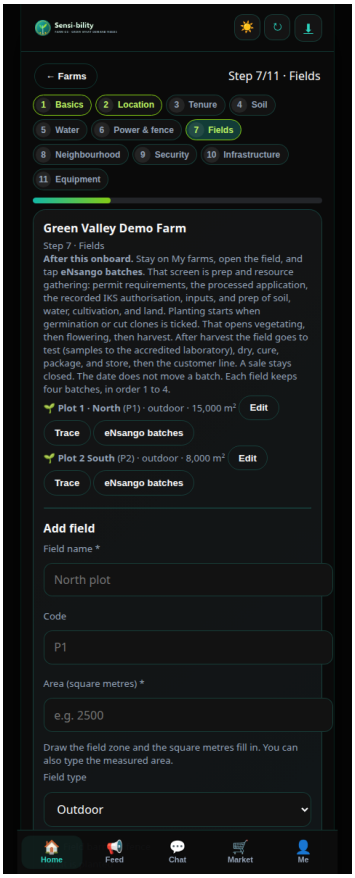

- Country, province, district, municipality, town, and the street or farm road.
- Find this address on the map, or use your GPS, then tap the map to draw the corners of the active zone.
- These points belong to this farm. They stay separate from the IKS place above.

Farmer / Producer

- Register as Farmer. Name each farm yourself. Open Home, then Farm onboard.
- On Location, finish the IKS Farm Zone, then Farm Location.
- Tenure, soil, and water documents use a title that follows the document type, such as Soil Test 2019.
- Water is step 5. Each source is one card with status and notes. Irrigation and water storage are practice cards. Power and fence is step 6. Perimeter fencing opens its status and notes on that card.
- Fields are measured in square metres. Neighbourhood is step 8 and Security is step 9. Write a note for each option you select. Equipment is grouped into cards.
- Processing stage and status on a field are the post-harvest record: drying, curing, cleaning, baling, storage, packed. They do not move an eNsango batch and they do not open a sale.
- After onboard: My farms, the field, eNsango batches. That is prep and resource gathering. Planting starts when germination or cut clones is ticked. That opens vegetating, then flowering, then harvest. After harvest: test, dry, cure, package, store, then the customer line. A sale stays closed. The date does not move a batch. Each field keeps four batches, in order 1 to 4.
- On eCannabis, join the IKS Cannabis Sandbox. Joining records membership. It does not open a sale.

Buyer / household and other buyers

- Register as Buyer. On Me, say whether you are a household, restaurant, hotel, retailer, school, business, distributor, or processor buyer.
- Market, then open a co-op listing. Orders: quantity, delivery address, and the date. Demand posts what you need by a date.
- eCannabis produce is visible from age 18. The customer journey for hemp or nsango starts after store. A sale stays closed. Amehlo stays closed.

Agro-processor

- Register as Agro-processor. You read lots. You do not capture a farm unless you also hold the farmer role.
- Ask the farmer for the lot code or QR. Processing equipment on a farm record does not publish a recipe. A sale stays closed.

Input supplier

- Register as Input supplier. Publish seed, feed, or equipment with a lot or batch number the farmer can copy onto the field.
- A listing does not open a hemp or nsango sale.

Logistics

- Register as Logistics. Keep coverage and cold-chain current, then quote on orders.
- You do not open a hemp or nsango sale.

Government Officer

- Register as Government Officer and choose one seat: extension officer, regulatory inspection, law enforcement, research agent (university, ARC, CSIR), policy, set-aside markets, economic development and national priorities, development finance, or the steering committee.
- You can read the quality system and the farm records your seat is allowed to see. You do not write the batches.
- A government seat does not issue a permit from this screen and it does not open a sale.

Compliance

- Register as Compliance. Say whether you are internal to one farm or external. An internal officer selects the farm. An external officer checks that the internal officer exists and is authentic.
- The internal officer writes the quality system on the farm: strategy, testing and inspecting, CAPA, records, and only the standards that apply. For each standard, say you need help to apply, or upload the document you already hold.
- You can read lots. You do not move an eNsango batch. A sale stays closed.

Accredited laboratory

- Register as Accredited laboratory. The farmer records your name and the sample code before you capture results.
- Record the sample, delivery, and the result: visual test, aromatic terpenes, heavy metals, microbes, cannabinoids, and the certificate of analysis. Record the accreditation reference before the harvest tests.
- This screen does not set a pass or a fail band. Temperature guidance on the batch stays 23-30 C and humidity 50-65%. EC has no invented optimal band. CO and water pH stay recorded without a pass band.
- A laboratory result does not open a sale.

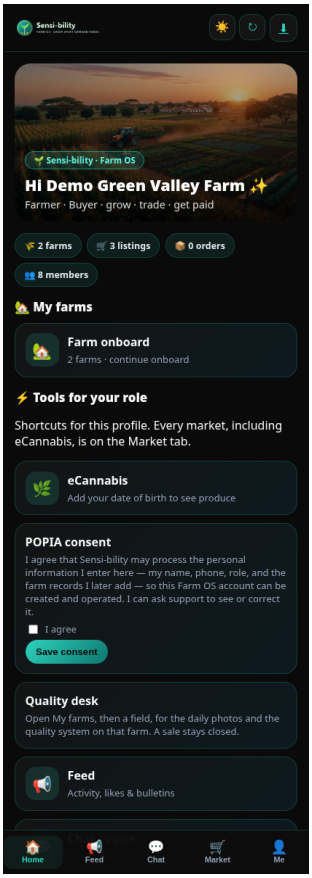

CareerWIL / admin assist

- Register as CareerWIL. Help with CIPC from the assist queue. Collect a voice, video, or text report when a field asks.
- You do not capture farm fields unless you also hold the farmer role.

eCannabis seats

Royal Houses, traditional healers, RasTafari, medical doctors, herbal dispensaries, and researchers register with that role, then open Home, then eCannabis, and join the IKS project. Joining records membership. It does not open a hemp or nsango sale, issue a medical card, or grant a permit.

- Royal Houses: this seat does not grant land, a permit, or a sale.
- Traditional healer: herbal steps are not published here.
- RasTafari: sacrament and adult-use cards stay closed. A sale stays closed.
- Medical doctor: a medical card is not issued here. A sale stays closed.
- Herbal dispensary: a medical card is not issued here. A sale stays closed.
- Zero Waste Innovative Researcher: a pilot stays a request. This seat does not grant an authorisation.

Where to open it

Web guide and films: https://sensi-bility.online/sensi/guide#reels. PDF: https://sensi-bility.online/businessite/static/src/docs/Sensi-bility-Role-Guide-2026-10-23.pdf. In the app, Home shows the tools for the role you joined with. Odoo administrators open Sensi-bility, then Farms, Members, Fields, Equipment, eCannabis projects, authorisations, Laboratory results, and Compliance. The farm form keeps IKS Farm Zone on its own page and Farm Location on the next page.
